

This photograph of Monique skipping on ST-91 is taken mid-winter (31 July)

*Remember*  
when you used to  
play barefoot on the grass?

Well the Australian backyard has never had it better: years of research have produced a range of soft leaf buffalo grasses that has excellent shade tolerance, remarkable colour and low maintenance.

Less time mowing the lawn means more time to play on it with barefeet...

The members of the ST Growers Group are licenced by H&T Whiting Turfgrass Development to grow and sell the ST Family of Lawns bred by them in Perth for Australian conditions. The growers list above is in random order.

ST-26, ST-85 and ST-91 soft leaf buffalo grasses have been bred for slow growing - requiring less mowing, watering and fertiliser. They have excellent shade tolerance, winter dormancy resistance and consistent deep green colour.

ST FAMILY	ST-26	ST-85	ST-91
<b>Shade Tolerance</b>	high	very high	high
<b>Texture</b>	soft, semi course leaf	soft, semi dwarf leaf	soft, dwarf leaf
<b>Wear Tolerance</b>	very high	high	medium
<b>Mowing Frequency</b>	7-10 days	10-14 days	15-30 days
<b>Disease Resistance</b>	high	high	high
<b>Drought Tolerance</b>	high	high	very high
<b>Application</b>	front/back yard parks/stadiums	front/back yard parks	front yard low traffic areas
