

ST-26

AusTine

ST-26 AUSTINE is a semi-dwarf buffalo grass that recovers well from wear and tear. Slightly coarser than ST-91, it is still very soft and will make a decorative, all-purpose lawn.

It has good shade tolerance, and a very attractive, rich green colour with not a trace of purple in the cooler temperatures of winter.

ST-85

AusFine

ST-85 AUSFINE is a fine-leaved semi-dwarf buffalo grass that has a very attractive emerald green colour from Spring through Summer to Autumn. Customers tell us that its shade tolerance is greater than other buffalo varieties.

It makes a tightly matted, low-maintenance lawn of which any home owner would be proud.

ST-91

AusDwarf

ST-91 AUSDWARF is a dwarf buffalo grass that has a very fine texture and is soft underfoot. A slight bluish tinge enhances its rich green colour, which is maintained throughout the year. No red or purple appearance is evident in winter.

Quite shade tolerant, ST-91 is renowned for being the slowest growing buffalo turf available, so needs less frequent mowing.
